Planning the Individual Project

Summary of the Project

Create a time management app that allows users to input tasks on certain dates to manage their time. Users can also retrieve their tasks from the database and record how much time they have spent on each task.

Goals

My first goal is to create my feature requirements and implement those in a simple prototype. Once that is complete I will create the design for the app and create test plans to complete the features.

Why?

As a software engineer, I am expected to deliver a completed product to the customer, and I must have a plan to complete my app and deliver useful features.

Features

- User task input
- Query
- Record

Project Test Plan

TBD

Milestones and Deadline

Specify when to build a prototype, ver1, and final version

Some of the milestones should include the implementation of requirements and/or tests.

- **Deadline:** ???
- **Milestone 1**
 - **Date:**
 - **Goal:**

Direction: Add more milestones if necessary.

Risk Analysis

1. I work 10am to 5pm, Monday, Wednesday's, and Friday's every week.
